SUPER	JASON CARDONE RVISORY PATENT EXAMINER	MHP				

U.S. Patent and Trademark Office PTOL-303 (Rev. 7-05) Continuation of 11. does NOT place the application in condition for allowance because: the arguments are not persuasive in light of the indicated art. In particular, the examiner does not agree with the applicant regarding the indication of transaction as defined by Chandra (PP. 14-16).

The examiner has determined that the steps within a given test script, i.e. a connection within a set of connections, is functionally equivalent to a transaction as currently defined by the instant application, as further indicated by the transaction count associated with the results of the test script as broken down into test components, i.e. per connection analysis. From this, it is clear that Chandra teaches the development and execution of a script composed of multiple steps, each step thus comprising a transaction, and further that Chandra teaches a breakdown of information by test script portion/transaction result (i.e. timing record per connection analysis) to be stored and/or reported, as shown in the Final Action.

A more detailed analysis of Chandra will be provided in response to an RCE or Notice of Appeal.
